Centronuclear Myopathy, CNM

(PTPLA)

This muscle disorder is characterized by exercise intolerance, weight loss, and muscle wasting. CNM stems from a mutation in the PTPLA gene which codes for an enzyme important for a number of cellular processes. Loss of PTPLA function is thought to cause muscle fiber damage and death, leading to replacement of the muscle mass with scar tissue.

Your dog's risk

 CLEAR

Finn is not at risk for Centronuclear Myopathy, CNM

What does this mean for him?

Finn doesn't have the variant we tested.

What can you do?

If your dog is affected, we recommend the following actions:

1

Keeping your affected dog comfortable and giving them the best quality of life you can are the only actions you can take at home.

A genetic test is not a diagnosis for disease

Please talk to your vet about Finn's genetic results, or if you think that he may have a health condition or disease.

Share results with your veterinarian
